Developer's
Documentation

Developer's Documentation

- V1.0 is from JB_InventorySnapshotSM_V1.0
- V2.0 I just changed the semantic model to have single to many relationships instead of bi-directional and then implemented a cascading measure to make so that slicers filter each other. I also brought in vw_factinventorydetail and vw_dimitesales (don't really need this table yet). I also implemented a start date parameter and set it to 20230601 for the fact tables and date table.
